

## WHAT IS CLAIMED IS:

1. An image pickup apparatus comprising:
  - an image pickup element having a first surface and a second surface opposite to the first surface, said image pickup element having an image region formed in the first surface;
  - an optical system that causes image light from a subject to form an image on the image region;
  - a supporting member that engages said image pickup element and said optical system, said supporting member having a first abutment portion that directly abuts said optical system and a second abutment portion that directly abuts said image pickup element.
2. The image pickup apparatus according to Claim 1, wherein the second abutment portion abuts an area on the first surface except for the image region.
3. The image pickup apparatus according to Claim 1, further comprising a first holding member that engages said optical system and said supporting member such that said optical system is sandwiched between the first holding member and said supporting member.
4. The image pickup apparatus according to Claim 3, further comprising a circuit board;
  - wherein said circuit board is fixed to said supporting member and electrically connected to said image pickup element, said circuit board having an opening formed therein such that said image region is exposed through the opening.
5. The image pickup apparatus according to Claim 4, wherein the second abutment portion is a projection that extends through the opening.
